

ABSTRACT

1 ! An antibacterial solution that cleans the plastic gum portion and enamel
2 tooth portions of dentures without the use of effervescence. It is known that
3 effervescence contributes to the deterioration of the plastic portions of dentures,
4 yet many of today's denture cleaners rely on effervescence as the cleaning agent.
5 The antibacterial solution of this invention sanitizes the dentures while cleaning
6 them and, at the same time, preserves the plastic portions of the dentures by
7 avoiding the use of effervescence.
